

SAWACO's Commitment to the UN Sustainable Development Goals

At SAWACO, we recognize the crucial role that businesses play in addressing the global challenges outlined in the United Nations Sustainable Development Goals (SDGs). As a company operating in the field of water desalination and bulk potable water distribution, we are committed to aligning our operations and strategies to positively contribute towards the achievement of these important global objectives.

Goal 6: Clean Water and Sanitation

As a water-focused enterprise, we are dedicated to expanding access to safe and affordable drinking water for all. We will work tirelessly to improve water quality, increase water-use efficiency, and promote sustainable water management practices throughout our value chain.

Goal 9: Industry, Innovation, and Infrastructure

We will invest in and develop robust, resilient, and sustainable infrastructure to support our water desalination and distribution operations. We will also embrace innovation and technological advancements to enhance the efficiency and environmental performance of our processes.

Goal 11: Sustainable Cities and Communities

By providing reliable access to clean and affordable water, we aim to contribute to the development of inclusive, safe, and sustainable cities and communities. We will collaborate with local authorities and stakeholders to ensure our operations align with and support their urban development plans.

Goal 12: Responsible Consumption and Production

Recognizing the environmental impact of our industry, we will prioritize sustainable production and consumption patterns. This includes optimizing our energy consumption, resources use, minimizing

waste, and exploring innovative technologies to enhance the circularity of our operations.

Goal 13: Climate Action

Acknowledging the threat of climate change, we will proactively work to reduce our greenhouse gas emissions, increase energy efficiency, and explore renewable energy solutions to mitigate our carbon footprint.

Goal 14: Life Below Water

As a water-related industry, we recognize the importance of protecting and sustainably managing marine ecosystems. We will implement measures to minimize the impact of our operations on marine environments, including responsible disposal of brine and other waste streams.

Goal 15: Life on Land

We will ensure that our land-based operations do not contribute to the degradation of terrestrial ecosystems.

Goal 17: Partnerships for the Goals

To achieve these ambitious sustainability goals, we will actively engage in multi-stakeholder partnerships and collaborate with solutions providers, NGOs, and local authorities. By fostering these cooperative relationships, we aim to leverage our collective expertise, resources, and influence to drive tangible progress towards the SDGs.

By aligning our company's strategies and operations with the UN SDGs, we aim to create long-term, sustainable value for our stakeholders, while contributing to the global effort in addressing the most pressing social, environmental, and economic challenges of our time. We are committed to regularly monitoring our progress, transparently reporting on our performance, and continuously seeking ways to enhance our positive impact.
